California High-Speed Rail Project

The California High-Speed Rail project is one of the largest and most complex engineering challenges in our State's history. LIN Consulting (LCI), as part of the Regional Consultant team, is preparing the Transportation Technical Report for the Los Angeles Union Station to Anaheim ARTIC segment, in support of the Environmental Impact Report/Environmental Impact Statement (EIR/EIS). LCI has been on the forefront of leading this highly complex impact analysis, which involves a 30.5-mile corridor and encompasses approximately 300 study locations and two station options – all on a compressed schedule. LCI has also been pioneering the effort to develop a refined, defensible methodology that is inclusive of Active Transportation and transit, engaging the High Speed Rail Authority's team on the ground – the Rail Delivery Partners (RDP) – on the most effective and efficient way to provide this critical-path deliverable in a highly urbanized environment.

Industry News

The State of California is working hard on implementing SB 743, a bill regarding new Level of Service (LOS) standards. The Governor's Office of Planning and Research (OPR) has released a revised proposal that reflects input that OPR received during the preliminary discussion draft. The proposal includes:

- (1) an explanation of the changes and how they respond to public input,
- (2) a revised proposed new CEQA Guidelines Section 15064.3,
- (3) a draft technical advisory containing recommendations related to methodology, thresholds of significance, safety, and mitigation, and
- (4) case studies illustrating how the proposed analysis would apply to sample projects.

A copy of the revised proposal is available here: https://www.opr.ca.gov/docs/Revised_VMT_CEQA_Guidelines_Proposal_January_20_2016.pdf
